

Adding fractions

- 1** Check the denominators (bottom numbers) match.
- 2** Add only the numerators.
Keep the denominator.

Worked example: $2/5 + 1/5 = 3/5$

Remember

When the bottom numbers match, just add the top numbers.

How to explain it

- I added the numerators because _____
- The denominator stays the same because _____

Look out for

X Don't

$$\frac{2}{5} + \frac{1}{5} = \frac{3}{10}$$

✓ Do

$$\frac{2}{5} + \frac{1}{5} = \frac{3}{5}$$

denominator
stays the
same
