

How to add three numbers

① $7 + 5 + 3$

② $7 + 3 = 10$

③ $10 + 5 = 15$

The steps

- ① Find two numbers that are a **number bond** to 10. They might not be next to each other.
- ② Add those two first: $\underline{\quad} + \underline{\quad} = 10$.
- ③ Add the **last number** to 10: $10 + \underline{\quad} = \underline{\quad}$.
