

How to add three numbers

- 1 Find two numbers that are a **number bond** to 10. They might not be next to each other.
- 2 Add those two first: $\underline{\quad} + \underline{\quad} = 10$.
- 3 Add the **last number** to 10: $10 + \underline{\quad} = \underline{\quad}$.

Worked example: $7 + 5 + 3$: $7 + 3 = 10$, then $10 + 5 = 15$
