

Tens, then ones

$$48 + 25 = 73$$

- 1 Partition the second number into tens and ones.

$$25 = 20 + 5$$

- 2 Count on the **tens** from the first number.

$$48 + 20 = 68$$

- 3 Will the ones go past the next ten? If not, add them.

- 4 If they will, add enough ones to **reach the next ten**.

$$68 + 2 = 70$$

- 5 Add the ones that are left.

$$70 + 3 = 73$$
